WORK EXPERIENCE

University of Colorado Boulder – Office of Information Technology

Dedicated Desktop Support

Boulder, CO

February 2025 – Present

- Provided comprehensive desktop support for University of Colorado Boulder departments, including setup, troubleshooting, and ongoing management of computers, smartphones, printers, and software, ensuring compliance with university IT standards.
- Handled hardware and software installation for university-owned devices, ensuring all systems met minimum technical requirements and were integrated with CU Boulder's Microsoft Azure Active Directory and JAMF Pro management infrastructure.
- Managed and resolved technical support requests through the ServiceNow ticketing system, ensuring efficient tracking, prioritization, and resolution of desktop support issues for university staff and faculty.

District 70 - Pueblo County High School

Electronic Repair Helpdesk Technician

Pueblo, CO

June 2022 - July 2023

- Delivered hands-on support to district personnel, students, and community members, offering responsive customer service by troubleshooting and resolving technical issues in a high-demand environment.
- Assisted in the upkeep and repair of district-issued technology, enhancing the longevity and performance of devices for both student and staff use.
- Coordinated with IT professionals and external vendors like Apple through detailed written reports and regular follow-up calls to ensure timely resolutions, providing updates and managing expectations for all stakeholders involved

PROJECTS

WhatsHappenin | <https://whathappenin.onrender.com/> | <https://github.com/lukewu1/WhatsHappenin/>

Fall 2024

- Developed a location-based news application that allowed users to drop pins on a global map and view curated local news for selected locations, fostering user engagement and geographic news exploration.
- Implemented dynamic front-end interfaces using HTML, JavaScript, Bootstrap, and Tailwind to create an intuitive and responsive user experience.
- Integrated back-end functionalities with PostgreSQL, Node.js, and Express.js, enabling seamless data retrieval and display of real-time local news based on user input.

Natural Highs | <https://github.com/AidanDonnelly1/Natural-Highs>

Fall 2024

- Collaborated with a team to develop the Natural Highs website platform for nonprofit, using Tailwind CSS to create responsive, mobile-friendly layouts and enhance the user interface for improved accessibility and engagement.
- Integrated a dynamic navigation bar using Tailwind CSS and DaisyUI, ensuring seamless transitions between pages and enhancing the user experience by providing easy access to key sections of the Natural Highs platform.
- Used Firebase Authentication to securely manage user access to surveys, ensuring data integrity and privacy, while providing a personalized experience for program participants.
