EDUCATION

University of Colorado Boulder — Boulder, Colorado, United States
Bachelor of Arts in Computer Science, Minor in Linguistics — *Expected May 2027*
Honors: Dean's List — *GPA: 3.987*

WORK EXPERIENCE

CrowdStrike — Remote
Cyber Intern — *May 2026 - August 2026*

- Designed and built VulnEngage, a Slack-native cloud vulnerability remediation platform integrating Falcon CSPM, ServiceNow, AWS Lambda, API Gateway, and DynamoDB to automatically route findings to system owners, surface live severity and remediation guidance, and enable resolution, escalation, and exception workflows directly from Slack.
- Engineered event-driven vulnerability workflows that automated owner identification, finding publication, remediation tracking, and ServiceNow state synchronization, reducing manual follow-ups, context switching, and stale security tickets while providing centralized visibility into high-risk cloud findings.
- Developed an AI-powered Network Vulnerability Assessment (NVA) scan-health reviewer using AgentForge/Vulcan, Python, and Slack integrations to parse daily scan reports, validate scan status, coverage and error conditions, acknowledge healthy runs, and automatically alert responsible teams when scanning issues required investigation.

University of Colorado Boulder – Office of Information Technology — Boulder, CO
Identity and Access Management Student Analyst — *November 2025 – Present*

- Resolved escalated authentication and authorization issues across enterprise identity systems, including Shibboleth SSO, Microsoft Entra ID (Azure AD), Active Directory, and LDAP, improving login reliability and security.
- Used SQL to validate identity attributes and support secure account lifecycle management, ensuring proper provisioning, deprovisioning, and access governance.
- Contributed to Agile sprints aimed at improving identity security, streamlining workflows, and enhancing overall IAM posture.

CrowdStrike — Remote
Information Security Launch Intern - Vulnerability Technical Operations — *May 2025 - August 2025*

- Designed and deployed an AI-driven vulnerability monitoring and triage system at CrowdStrike, building a Go-based ETL pipeline on AWS to aggregate threat data from NIST CVE and internal security data sources into LogScale, cutting mean time to detect threats across the tech stack used by CrowdStrike internally.
- Enhanced vulnerability investigation workflows by automating threat assessments in ServiceNow work notes and sending real-time Slack alerts; standardizing procedures, reducing manual effort, and significantly improving response times in incident handling.
- Led AI innovation initiatives within CrowdStrike's Vulnerability Management team, advancing the development and adoption of intelligent automation across key security workflows and data processing.

University of Colorado Boulder – Office of Information Technology — Boulder, CO
Dedicated Desktop Support — *February 2025 – November 2025*

- Supported and managed university Windows/macOS endpoints, troubleshooting hardware/software issues and deploying compliant systems through Azure AD and JAMF Pro while resolving and prioritizing incidents in ServiceNow.

PROJECTS

Multi-threaded DNS Resolver (C, POSIX threads) | https://github.com/EricDavidd/Multi-threaded-DNS-Resolver **Fall 2025**

- Designed and implemented a multi-threaded DNS resolver that mirrors real-world resolver behavior, using concurrent requester and resolver threads to safely process large hostname workloads with reliable audit logging.
- Developed a multi-threaded architecture using pthread synchronization (mutexes, shared queues) to prevent race conditions and ensure safe parallel hostname resolution.
- Added controlled teardown using a poison-pill signaling pattern, enabling clean resolver termination without resource leaks and complete logging of resolved and unresolved hostnames which support auditability.

TECHNICAL SKILLS

Languages: Python, Go, C, C++, SQL, Bash, PowerShell, Java, JavaScript, HTML/CSS
Security & Identity: CrowdStrike Falcon, LogScale, Nmap, Wireshark, tcpdump, Microsoft Entra ID (Azure AD), Active Directory, LDAP, Shibboleth SSO
Cloud & Platforms: AWS (Lambda, API Gateway, DynamoDB), ServiceNow, JAMF Pro, Git/GitHub
Systems: Linux, Windows, macOS
